- Integrated with hybrid service management.
- On-premise and public clouds.
- Virtual and bare-metal resources.

Efficient

- Speeds application development
- Reduces security compliance costs.
- Simplifies security audits across hybrid IT services.

SECURITY COMPLIANCE CHALLENGE

Enterprises want to take advantage of the flexibility and cost advantages of running applications in the public cloud. The challenge for the Chief Information Security Officer, is achieving consistent application security compliance across both private and public clouds.

50% of the cost of managing cloud apps is manual security compliance. Manual security is slow, error prone, increases risk.

50% of security parameters on public clouds are not set correctly increasing risk.

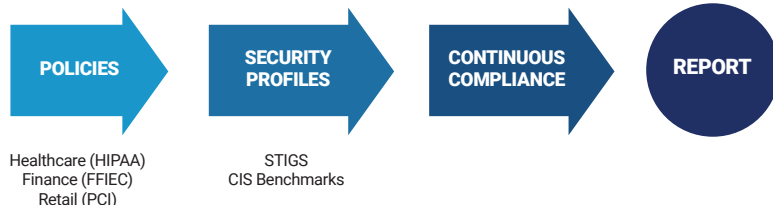

95% of cloud security parameters can be configured automatically

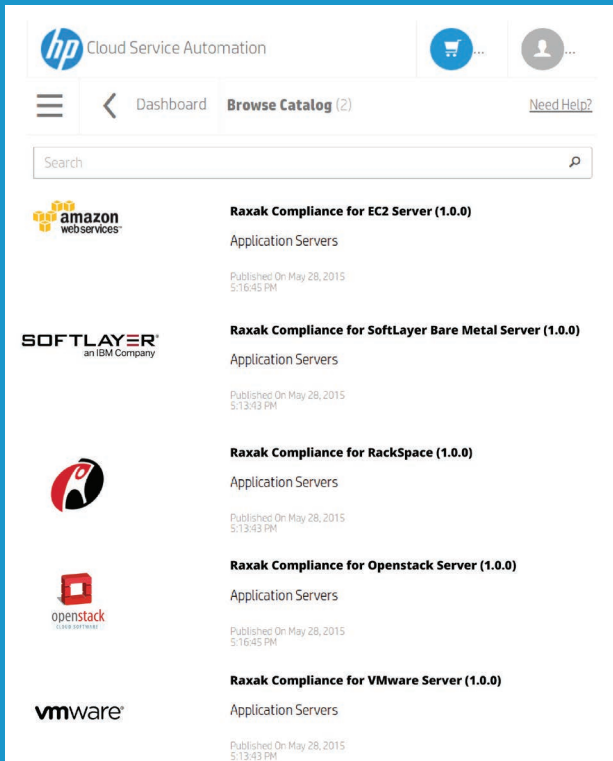

AUTOMATE AND SIMPLIFY SECURITY COMPLIANCE

Raxak Protect is a SaaS-based security offering that empowers IT and application development teams to automate security and ensure compliance across their private and public clouds.

"The integration of Cloud Raxak Protect automated security with HP's Cloud Service Automation, will enable Athreya Technologies to deliver a compliance solution for the regulatory driven healthcare and financial service industries. By ensuring security compliance, this will provide these clients the flexibility to run their applications on a private or public cloud."

-Balaguru Athreya, CEO of Athreya

"The tight integration with HP service management tools provides enterprise customers a turn-key solution for automating application security compliance across both public and private clouds."

-Atul Garg, VP/ GM of HP Cloud and Automation

SIMPLIFYING & AUTOMATING CLOUD SECURITY-COMPLIANCE

Scalable, Flexible, Efficient

- Scalable Architecture
- Agentless
- API driven
- SaaS tool, Appliance, or Full Managed Service
- Virtual or Bare-metal resources

24/7 Automated Compliance & Remediation

- 24/7 monitoring
- Auto-remediation
- Audit-ready reporting

Mission Critical-Level Protection

- Security profiles using Defense Industry STIGS
- Custom support for Industry Standards HIPPA, FFIEC, PCI

One-touch Compliance Across Clouds

- One-touch security across clouds with IT Service Catalog
- DevOps integration for full app life-cycle security

HOW RAXAK PROTECT WORKS

Raxak Protect is designed with a robust cloud-scale architecture that can rapidly handle large changes in the load (number of assets being managed) without impacting the performance of each asset. Our architecture makes optimal use of design patterns that build multi tenancy, isolation, and redundancy as the basis of our operation.

Raxak Protect Agentless Architecture
