

# ResEvo.Arrow

Business intelligence solution

In today's turbulent business environment, where every move is being observed, decision-making is a challenge. [And this does not involve simple decisions in the style of 'YES' or 'NO'.](#)

It is necessary to accept rapid and well-founded decisions. Is this today, each of us being overloaded with information, still possible? What kind of information can give us the best highlight on the problem domain? Is the information correct? How to interpret it? All this are challenges that we face every day.

---

ResEvo.Arrow is designed so that it provides its customers prompt, accurate and primarily useful information. With its unique components ResEvo.Arrow provides a **new approach to familiar ideas:**

To provide quality information to the needs of business decision makers, by using the indicators/measures directly linked to key business functions and to create the greatest value to the company.

---

#### All this is included in software which:

- ↳ is easy to use,
- ↳ is rapidly implemented,
- ↳ provides merger of different data sources,
- ↳ in order to function does not require any additional system software,
- ↳ provides information available immediately.

---

#### The objectives of the ResEvo.Arrow solution:

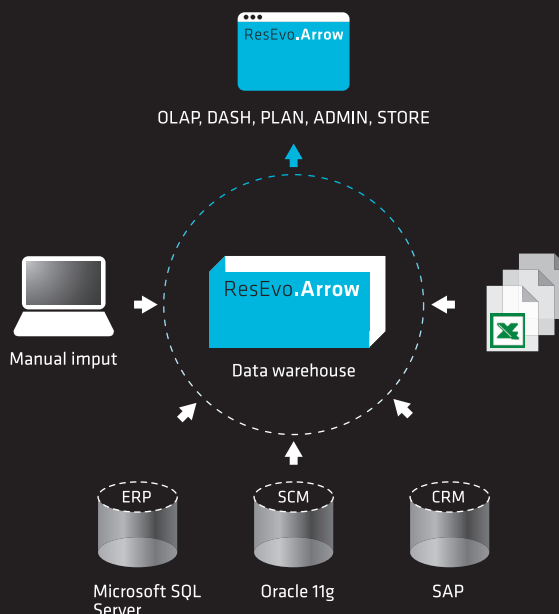

- Easy to understand
- Efficient
- Transparent

#### Key abilities:

- Creation of indicators
  - Scenario analysis
  - Rapid detection of opportunities
-

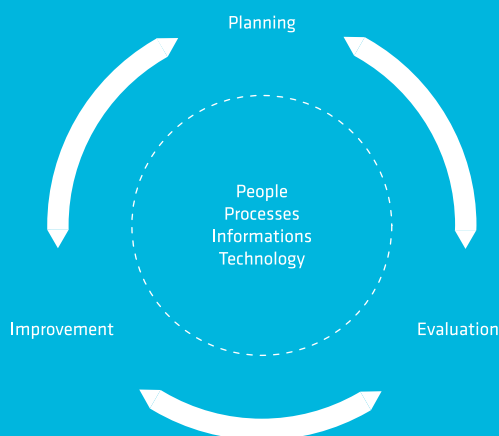

In order to make good decisions, companies are forced to analyze huge sets of data from different information sources.

ResEvo.Arrow gadgets cover the full range of information spectre, constituted from individual data to Key Performance Indicators.

With modern architectural approach (SOA - Service Oriented Architecture) and its integrated components ResEvo.Arrow supports complete decision-making process:

- ↳ Design of the objectives, preparation of instructions for their achievement; establishment of Knowledge and Bonuses system
- ↳ Optimization, Planning of future actions and decisions in order to achieve objectives
- ↳ Getting to know (evaluate) people and business processes better

### Why ResEvo.Arrow

#### ■ Easy to implement and use

It can be implemented easily, without any additional customisation to the business environment of the company. It requires no investment into existing HW capabilities.

#### ■ The system for all levels of decision-making and responsibilities

System provides vital information to individual analysts, as well as top-management.

#### ■ Possibilities of improvements

Users have the possibility of future results planning. Tools for making WHAT IF analysis are included.

#### ■ Simple measures and Key Performance Indicators (KPI)

The system provides simple and understandable measures and KPIs, as well as business performance details overview, which affect specified measures and KPIs

#### ■ Use of existing information

Existing information, from existing data sources, which are available in the company, are being used.
