

MongoDB tools, optional downloads

Along with the MongoDB Enterprise Advanced from IBM product (Operator) you purchased or are trialing, there are additional add-on features that you can download and install to use with the Operator.

Connector for Business Intelligence (BI):

The MongoDB Connector for Business Intelligence (BI) allows users to visualize their MongoDB Enterprise data using existing relational business intelligence tools. <https://docs.mongodb.com/bi-connector/v2.0/>

Download: [mongodb-bi-linux-x86_64-rhel80-v2.13.1.tgz](#)

Install instructions: <https://docs.mongodb.com/bi-connector/v2.0/installation/>

Compass:

MongoDB Compass is the GUI for MongoDB. Compass allows you to analyze and understand the contents of your data without formal knowledge of MongoDB query syntax. <https://docs.mongodb.com/compass/current/>

Download – OS X: [mongodb-compass-1.20.4-darwin-x64.dmg](#)

Download – RedHat: [mongodb-compass-1.20.4.x86_64.rpm](#)

Download – Ubuntu: [mongodb-compass_1.20.4_amd64.deb](#)

Download – Windows: [mongodb-compass-1.20.4-win32-x64.msi](#)

Install instructions: <https://docs.mongodb.com/compass/current/install/>

Charts:

MongoDB Charts is a tool to create visual representations of your MongoDB data. Data visualization is a key component to providing a clear understanding of your data, highlighting correlations between variables and making it easy to discern patterns and trends within your dataset. <https://docs.mongodb.com/charts/onprem/>

Download: [charts-docker-swarm-19.12.1.yml](#)

Install instructions: <https://docs.mongodb.com/charts/onprem/installation/>
